JAKOB Vacuum technology

JAKOB Vacuum Technology is a company with experienced employees specializing in the production of vacuum components. In addition to its catalog of standardized vacuum components, JAKOB also manufactures custom-designed products. Manufacturing processes include machining, TIG and plasma welding, vacuum brazing, and vacuum annealing. This allows for the production of a diverse, high-quality product range for vacuum technology users, whether standardized or custom-designed.

JAKOB Vacuum Technology product overview:

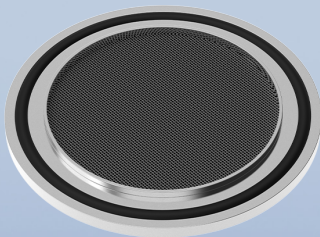

- KF Small flanges

- Gas locks with shut-off valve

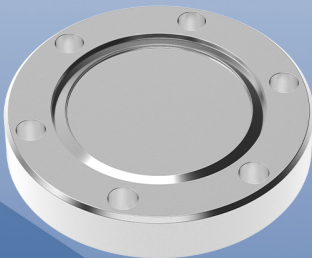

- ISO-K flanges

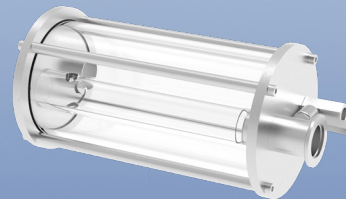

- Adsorption traps (zeolite traps)

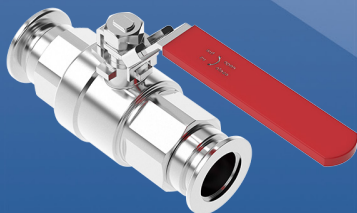

- CF flanges

- Condensate separator

- Valves

- Pressure test unit
